

INVITED SESSION SUMMARY

Title of Session:

Interdisciplinary Approaches in Business Intelligence Research and Practice (IABIRP 2016)

Name, Title and Affiliation of Chair:

Prof. Ivan Luković, University of Novi Sad, Serbia

Details of Session (including aim and scope):

One of the ever hot issues in many organization systems is how to transform large amounts of daily collected operational data into the useful knowledge from the perspective of declared company goals and expected business values. The main concern of this invited session is a Business intelligence (BI) paradigm, as a set of theories, methodologies, processes, architectures, and technologies that transform raw data into meaningful and useful information. Various interdisciplinary oriented BI approaches may provide organizations the ability to use their data to improve quality of business, increase financial efficiency and operational effectiveness, conduct innovative research and satisfy regulatory requirements. Applications of appropriate BI implementation methodologies together with outcomes related to collaborative and interdisciplinary approaches are inevitable when applying BI approaches to large and complex organization systems. For many years, such interdisciplinary approaches were used in analyzing big data gathered from not only business sectors, but also public, non-profit, and government sectors.

The main goal of the session is to attract researchers who will present their contributions, interdisciplinary approaches or case studies in the area of BI. The focus may be set to various BI aspects, such as: data warehousing, reporting, online analytical processing, analytics, data mining, process mining, text mining, predictive analytics and prescriptive analytics, as well as various aspects of big data analysis and time series analysis. We express a special interest in gathering scientists and practitioners interested in applying BI approaches predominantly in public and government sectors, such as healthcare, education, or security services. However, experts from all other sectors are also welcomed.

Submissions are expected from, but not limited to the following topics:

- Business Intelligence – Theoretical and practical aspects
- BI Applications and Industry Experience
- Data Warehousing, Data Mining, Online Analytical Processing, and Reporting Capabilities
- Predictive analytics and Prescriptive analytics
- Statistical analysis and characterization
- Process Mining, Pattern Mining, and Swarm Intelligence
- Decision and Regression Trees
- Data quality assessment and improvement: preprocessing, cleaning, missing data, etc.
- Semi-structured or unstructured data in BI systems
- Information integration for data and text mining
- Cloud-computing models and scalability in BI systems
- Data privacy and security issues in BI systems
- Business Intelligence and Analytics for Healthcare and other Public Sectors
- Educational Data Mining
- Social network data analysis
- Web survey methods in business intelligence
- Organizational and human factors, skills, and qualifications for BI Approaches
- Teaching BI approaches in academic and industrial environments

Main Contributing Researchers / Research Centres (tentative, if known at this stage):

Our intention is to distribute this call to many researchers and practitioners from a wide BI community all over the world. A narrow focus should be set to the various communities from Europe and particularly Central and South-East Europe regions.
